

Access Control Solutions

Preventing unauthorised entry for safety and security in the most secure environments

“The work undertaken by CornerStone enabled the client to engage with a principal contractor for the delivery of the Automated Access Control System solution. Utilising CornerStone's experience in the industry, technical support was provided during the tendering phase and a robust technical evaluation of the solutions was offered to the client's commercial team. The client went on to engage CornerStone to project manage the installation of the chosen solution through to a successful project handover”.

Project

Our client had a requirement for the provision of a RIBA stage 3 design for an Automated Access Control System (AACS) to manage vehicle and pedestrian access on the perimeter of their site. This AACS design was to comply with both the UK Government and European standards. The design was to enable the successful tendering of the project with the intention of appointing a Principal Contractor who would deliver the final solution.

CornerStone aligned the design with both the threat and risk environment relevant to the site in addition to a significant schedule of client operational requirements.

About CornerStone

CornerStone is an award winning, independent, international Security Consultancy and Risk Management firm. We help organisations protect their people, assets, intellectual property and profits by identifying security threats and mitigating the risks that face today's global businesses. We work with clients in various parts of the supply chain to provide objective, un-biased advice, acting as their trusted advisor. What makes us different is the quality of our people, our highly developed process, problem solving approach and our innovative solutions.

Outcome

Working with the client, CornerStone undertook stakeholder engagement workshops to verify the client's risk assessments, operational requirements and site-specific needs. Utilising this data, CornerStone produced a design for the site that defined a solution in such a way that a range of products and manufacturers could be considered, to ensure that the client was able to achieve the best value for money. Utilising CornerStone's subject matter expertise and experience, technical support was provided during the project initiation phase. CornerStone went on to project manage the installation of the chosen solution to a successful conclusion, on time and under budget.
