### Project

CornerStone’s initial involvement with this large international technology and media company was to tender and win a security design project for a new London regional office. This project was paused as the architectural design was refined by internal stakeholders but it allowed CornerStone to gain an understanding of the organisation and for them to experience the range of security consultancy services we could deliver. Based on this CornerStone were asked to manage a larger volume of security design and delivery management of projects across their EMEA estate.

### About CornerStone

CornerStone is an award winning, independent, international Security Consultancy and Risk Management firm. We help organisations protect their people, assets, intellectual property and profits by identifying security threats and mitigating the risks that face today’s global businesses. We work with clients in various parts of the supply chain to provide objective, un-biased advice, acting as their trusted advisor. What makes us different is the quality of our people, our highly developed process, problem solving approach and our innovative solutions.

### Outcome

Working with the client and other stakeholders, CornerStone provided a team of consultants that could deliver the new project processes and delivery management model.

The client had undergone a period of rapid expansion around the world and as the volume of security projects had increased, there was a corporate need to provide some independent checks and balances to design and implementation processes. CornerStone were appointed to provide the full range of security risk, design, project oversight and witness testing services from Scandinavia to the tip of Africa and all points throughout the EMEA region.
